

## **Project Management Tutorial Series Presents:**

Effective Project Management is a must in today's rapidly changing environment. The precursors to today's project management tools were developed in the 1950's by the Navy to provide surety of budget and schedule adherence for complex projects. These tools spread to construction projects and eventually to information technology projects. Today, the expectation for any temporary, one of a kind endeavor is that the quality, schedule and cost will be controlled with modern project management processes.

**Join the Eastern Idaho Chapter of PMI for bi-monthly tutorials on the basics of project management**

## **An Overview on Project Integration**

---

### **William P. Harroun, PMP, Vice President, Project Planning and Integration for CH2M-WG Idaho, LLC for the Idaho Cleanup Project**

Bill has over 25 years of experience in the field of project management and project controls, including over sixteen years supporting projects within the U.S. DOE. His main areas of expertise include restructuring of operating organizations to a project approach to management, with expertise in project baseline development, cost engineering and estimating, project scheduling, computerized project control systems, and government Earned Value Management Systems (EVMS). Bill is an adjunct professor of project management at University of Colorado at Denver and has a B.S. in Business Administration and a B.A. in Psychology.
